Justin Vinh

Researcher @ Dana-Farber Cancer Institute | Biomedical Engineer |
Astronaut Scholar | Photographer | Committed Humanitarian
Washington DC-Baltimore Area

Summary

Growing up, I have had a fascination with the field of immunology. There was something magical reading about cells hunting down other cells – pathogens and cancerous cells – doing their work in a way approaching sentience. This fascination with immunology still remains with me. I graduated from the University of Virginia in 2025 with a B.S. in biomedical engineering, a minor in data science, and a focus on immunoengineering. My research experiences have taken me from studying the effects of heating dendritic cells to studying immune infiltration into the tumor microenvironment of breast cancer to characterizing the use of sonodynamic therapy on glioblastoma.

Because of these experiences, coupled with my strong desire to serve the public through clinical care, I am seeking roles that lie at the intersection of translational research and patient care. I am passionate about expanding my knowledge in these areas and leveraging data analytics to make a meaningful impact in the fields of healthcare and immunoengineering.

Experience

Dana-Farber Cancer Institute

Research Assistant | Lindvall & Rhee Labs

August 2025 - Present (10 months)

Boston, Massachusetts, United States

Principal Investigators: Dr. Charlotta Lindvall, MD, PhD; Dr. John Rhee, MD, MPH

My research focuses on leveraging large language models (LLMs) in clinical free text extraction and analysis as well as researching the use of LLM implementation in healthcare settings to facilitate inter-team and physician-patient interactions.

Justin Vinh Photography

Freelance Photographer

April 2019 - Present (7 years 2 months)

Charlottesville, VA | Washington DC-Baltimore Area

As a photographer with over 10 years of experience, my camera has followed me almost everywhere, and my experiences have ranged from taking pictures of birds in a forest to religious events at churches. My specific skill set includes event photography, macro photography, nature photography, portrait photography, and astrophotography.

University of Virginia

3 years 9 months

Research Assistant | UVA Sheybani Lab

December 2021 - August 2025 (3 years 9 months)

Charlottesville, Virginia, United States

Principal Investigator: Dr. Natasha Sheybani, Dept. of Biomedical Engineering

My research focus includes examining the effects of focused ultrasound on dendritic cells and their interactions with the tumor microenvironment. I further study sonodynamic therapy treatment with glioblastoma, with an aim of optimizing treatment and characterizing the secretome. I take particular interest in examining EVs released due to focused ultrasound and characterizing their immunological connections.

Student Instructor

January 2025 - May 2025 (5 months)

Designed and taught to over 30 students the course BME 1501 - Finding & Figuring Cancer: An Exploration

Resident Advisor

July 2022 - May 2024 (1 year 11 months)

As a resident advisor, I work to administer UVA Housing's policies in on-campus housing as well as develop and execute events to promote a residential community.

Undergraduate Summer Research Fellow | UVA Sheybani Lab

May 2022 - August 2022 (4 months)

Charlottesville, Virginia, United States

As a researcher for the 2022 UVA Engineering Dean's Undergraduate Research Fellowship, I spent 10 weeks at the University of Virginia working under Dr. Natasha Sheybani in the Department of Biomedical Engineering to

research the immunological effects of focused ultrasound on dendritic cells and the extracellular vesicles that they release before and after exposure in an effort to improve cancer immunotherapies.

UVA Health

Emergency Medicine Scribe

September 2023 - February 2024 (6 months)

Charlottesville, Virginia, United States

I facilitated medical encounters and assisted physicians by transcribing patient interactions into the electronic health record system (EPIC).

National Cancer Institute (NCI)

Undergraduate Research Fellow | NCI Center for Biomedical Informatics and Information Technology

May 2023 - August 2023 (4 months)

Bethesda, Maryland, United States

Principle Investigators: Dr. Noemi Kedei, Dr. Janelle Cortner, Scott Lawrence

As a researcher for the 2023 NIH Summer Internship Program, I spent 15 weeks at the National Cancer Institute working to expand our knowledge of the tumor microenvironment using highly multiplex immunofluorescent imagery and data science-driven analysis using HALO and NIDAP. I helped develop & optimize a workflow via NIDAP (a novel cloud platform) to analyze single-cell immunofluorescent images and create new graphing modalities to guide machine-learning algorithms. This work made significant progress towards democratizing such multiplex single-cell analyses for all researchers with the end hope of designing algorithms to predict the immune response within the tumor microenvironment.

Northern Virginia Community College (NOVA)

1 year 8 months

Honors Program Ambassador

August 2020 - August 2021 (1 year 1 month)

Sterling, Virginia, United States

I served as the student bridge between Honors students, prospective Honors students, and the NOVA Honors Program. My responsibilities included organizing and leading Honors Program events, participating in outreach programs to recruit new Honors students, and shaping the future path of the Honors Program through student recommendations.

Math and Science Tutor - NOVA Loudoun Tutoring Center

January 2020 - July 2021 (1 year 7 months)

Sterling, Virginia, United States

I tutored struggling college students weekly in precalculus, calculus, biology, chemistry, and physics. Working with students, my responsibilities included explaining difficult concepts and introducing good study habits.

Education

University of Virginia

B.S. in Biomedical Engineering (Highest Distinction), Minor in Data Science · (2021 - 2025)

Northern Virginia Community College (NOVA)

Physical Sciences, Honors Program (High School Dual Enrolled) · (2018 - 2021)
